

Desktop Dock 2.0

The Desktop Dock 2.0 provides the BioDigitalPC® card with a fully functioning desktop computer experience. Its simplicity, very small size, and low power consumption provide convenience and flexibility.

The Desktop Dock 2.0 consists of two USB 2.0 connections, one USB 3.0 connection, a Mini-DisplayPort, a 10/100 Ethernet connection to access the internet, as well as a power connection.

Insert the BioDigitalPC® card into the connector located in the Desktop Dock 2.0 and it will automatically power up. The BioDigitalPC® card will boot up the installed operating system.

The Desktop Dock 3.0, in conjunction with the BioDigitalPC® card, runs on 12VDC at an average power draw of 10W (8W - 10W TPD during normal use). Proudly made in the USA. **TAA Compliant.**
