

Embedded Computing

Problem:

There isn't much differentiation between embedded, single board computer solutions in the market and when there is a hardware problem, systems and processes can grind to a halt during troubleshooting.

Solution:

ADDC has designed a line of [integration readers](#), all of which can be used with any [BioDigitalPC card](#). Our OEM partners know that all cards are hot-swappable and can be replaced or upgraded in seconds – an important feature when lives, missions, and business processes are at risk.
